marmakala book papersQ: SQL query to match values from two different tables I have a table and am trying to pull some data from another table which are identical except for the date column in the second table. So far I have tried the following:

```
SELECT tblRecord.customer,  
tblRecord.recordType, tblRecord.recordID,  
tblRecord.recordDate, tblRecord.upc,  
tblRecord.qty, tblRecord.mfg,  
tblRecord.price, tblRecord.notes,  
tblRecord.pic FROM tblRecord,  
tblComponents WHERE  
tblRecord.recordID =
```

```
tblComponents.recordID ORDER BY  
tblRecord.recordDate
```

This returns what I want, but I'm not sure how to filter out the results where recordType in the tblComponents table is NULL. Could

anyone shed some light? EDIT: The above query works great, but there is a table I have but I don't know how to select data from it. It's just a list of items, i.e. "T-Shirt, Hoodie, Sweatshirt", so for example if I select a t-shirt I want it to return 3 results because that's what the user has, rather than one unique shirt listed with 3 results 595f342e71
