The biggest update for the camera in the digital world is the addition of support for the NEF format. This makes the Lightroom 5 update the only major addition to the software since its release. Even so, there are some adjustments that are made to the classic workspace to make it more user-friendly and interactive. The Compact Mode in the Elements Update brings tight integration with Photos and Creative Cloud Libraries. The new Workspace dialog box gives you more control over how you organize your files and allows you to easily switch between modes. The new method for managing workspaces saves valuable space on your hard drive. While the update allows crops to be applied to the image directly from its original form, and allows for direct brush and airbrush work, there are no major overhauls in the selection tools. However, there are certainly changes in the way shapes are handled. This makes corrections to objects and piece-by-piece selection more accurate and intuitive. The basics remain the same, but there are some new additions. The adjustment panel now gives a color - change guide, and it is possible to print your image's even exposure. There is also built-in support for the NEF format that allows Lightroom 5 to handle RAW files. This means no more converting RAW files with Lightroom. Most attractive is the Design aspect. It's organized and easy to navigate. It's easy to find the features you need and can find a photograph by searching for the color, date, headline and any other relevant keywords. You can also drag images to the canvas and place them anywhere by using the Pin tool. You drag the image to the canvas and click the Pin or Rotate tool. It's available through the shortcut menu. The cropping tool lets you drag the selection handles. This tool is useful when you want to crop out unwanted regions.
